6 Test Requirements Specification

6.1 General Description of Applied Standards

Assessment of the compliance of low power electronic and electrical equipment with the basic restrictions related to human exposure to electromagnetic fields (10 MHz to 300 GHz)

6.2 RF Exposure Evaluation

Equipment complying with the requirements for the general public is deemed to comply with the requirements for workers without further testing.
The conformity assessment to demonstrate equipment compliance shall be made according to EN 62479:2010, 4.1 and Clause 6.
If routes B, C or D of 4.1 of EN 62479:2010 are followed then the values of Pmax, as described in 4.2 of EN 62479:2010 and given in Annex A of EN 62479:2010, shall be meet in below Table

Table 1 — Values of *P*max

Exposure tier	Region of body	*P*max (mW)
General public	Head and trunk	20
	Limbs	40
Workers	Head and trunk	100
	Limbs	200

A. Typical usage, installation and the physical characteristics of equipment make itinherently compliant with the applicable EMF exposure levels such as those listed in thebibliography. This low-power equipment includes unintentional (or non-intentional)radiators, for example incandescent light bulbsand audio/visual (A/V) equipment,information technology equipment (ITE) and multimedia equipment (MME) that does not
contain radio transmitters.
NOTE: Equipment is described as A/V equipment, ITE or MME if its main use is playback/recording of music, voice or images, or processing of digital information.
B. The input power level to electrical or electronic components that are capable of radiatingelectromagnetic energy in the relevant frequency range is so low that the availableantenna power and/or the average total radiated power cannot exceed the low-powerexclusion level defined in 4.2.
C. The available antenna power and/or the average total radiated power are limited byproduct standards for transmitters to levels below the low-power exclusion level definedin 4.2.
D. Measurements or calculations show that the available antenna power and/or the averagetotal radiated power are below the low-power exclusion level defined in 4.2.

6.2.1.1 Measurement Record:

The available antenna power of this EUT is **BT(BR+EDR): 2.90mW(4.63dBm), BT(BLE): 2.74mW(4.38dBm)** the power are below the low-power exclusion level defined in 4.2(Pmax: 20mW).”
